

Project Initialization and Planning Phase

Date	24 June 2026
Team ID	
Project Name	Human Development Index (HDI) Prediction System
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Example:

I am	I'm trying to	But	Because	Which makes me feel
A resident living in a flood-prone area.	Receive timely and accurate flood predictions so that I can protect my family, home, and belongings before flooding occurs.	I often do not receive reliable flood warnings early enough to take preventive action.	Existing forecasting methods may not effectively analyze changing weather conditions and rainfall data in real time.	Anxious, vulnerable, and unprepared during heavy rainfall and possible flood situations.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A government policymaker responsible for monitoring a country's development..	Evaluate the Human Development Index (HDI) quickly and accurately for better planning and decision-making.	Collecting and analyzing multiple development indicators manually is time-consuming and difficult.	HDI depends on several socio-economic indicators such as health, education, income, and internet accessibility that require combined analysis.	Concerned about making timely and informed decisions that improve national development and public welfare.

PS-2	A student or researcher studying human development across countries.	Predict and compare the Human Development Index (HDI) using development indicators for learning and analysis.	I do not have a simple tool to estimate HDI from available socio-economic data.	Manual HDI calculation requires collecting multiple indicators and understanding their relationships, which is complex and time-consuming.	Frustrated because it takes significant effort to analyze and compare development levels accurately.
